Dear Chuck:

In your work in Section 18, if you need any help with water requirements via our leasing you and arranging for you to get Smart Reservoir water onto Section 18 via our ditch systems through the plant, please let me know.

By the way, today Saturday, May 3, with Security approval, Joe Meininger and I entered the plant site at approximately 7:30 a.m., as we do annually and have done annually to work on our irrigation ditches, however, this year since we have lost most of Section 18 we dropped the water into your upper lake then put an equal amount from the upper lake into the lower lake. I recall a discussion we had about the outlet works in the lower lake approximately a year ago when I indicated to you that we did not use that lake for our irrigation process. I neglected to remember that we do drop some of our water into that lake to carry on irrigation activities at 96th and Indiana, maybe we could work out some agreement whereby at our expense we could get in there in the Fall of 1986 or Winter of 1986, to repair the head gate on that lake.

In the meantime, I have blocked off the outlet pipe as you had indicated that you might have your crews do last year. We can carry on any irrigation activities we need for the Summer of 1986 via the standard seepage methods that we have used for years and years.

ADMIN RECCRD

1013-RF-86

I would also like to rework our ditch systems so that we can irrigate the remaining six acres that we have at 96th and Indiana, maybe someday we could get together over lunch and discuss this to your satisfaction. Let me know what help I can be on any irrigation requirements you might have in Section 18, and I hope by now we have satisfactorily complied with your wishes regarding the clay pit and the gravel pit operations. If not I hope you at least saw that we demonstrated considerable effort in trying to correct the unfortunate situations that occurred a few weeks ago. Let me hear from you when you have time.

Yours very truly,

CHURCH RANCH

Charles C. McKay
